The World of Floppy Disk is a.HIV prevalence as a tool in evaluating HIV prevention needs: a qualitative review of the literature. The purpose of this study is to conduct a qualitative review of the literature using HIV prevalence as a tool to evaluate prevention needs in various groups of men and women. A review of the literature was conducted of the scientific papers and gray literature using the Web of Science, Scopus, ProQuest, and Google Scholar databases from 1980-2005. Articles were identified through the following search criteria: HIV prevalence as reported by the respondent, published between 1980 and 2005, and from developed countries. Data were collected and analyzed to categorize the population, context, method, and findings. In total, seventy-four articles and one book were identified, of which sixty-eight were articles and six were chapters in book form. Research articles predominated (n = 61); other research forms were opinion articles (n = 7), reports (n = 4), and case reports (n = 2).

Although several articles focused on HIV prevalence among pregnant and postpartum women, few evaluated HIV prevalence among other vulnerable groups. This literature review identified significant research gaps among women, men with same-sex partners, and women with a history of coerced sex. HIV prevalence has utility in evaluating HIV prevention needs. However, further research is necessary to determine whether HIV prevalence is useful as a tool to evaluate prevention needs for men, women with male sex partners, and women with a history of coerced sex.
