Morpheus Photo Animator Crack+ [Latest]

Morpheus Photo Animator is a handy application designed to generate animations by combining two images. It allows you to transition between the two images by adding morphing and warping effects. The morphing effects are used frequently in presentations, movies and TV shows to display the transformation in landscapes, portraits or other elements. Since they emphasize the difference between two persons, objects or moments you can use them to tell a story in just a few seconds. This tool enables you to use the same effect on your computer without requiring expensive equipment or experience in video editing. You just have to load the images and configure the effect and export the animation file. In order to warp a photo you need to specify the parts of the image that need to be transformed by placing a series of points on the original. You need to adjust the point location on the second image in order to set the direction and intensity of the transformation. While the casual users can simply add the images, select the points and generate the animation, the professionals can launch the application in Normal Mode to access more customization options. When running in normal mode, the Morpheus Photo Animator provides access to the rendering options which control the number of frames per second and the background transparency. If you want to generate smooth and accurate animations you need to test various settings. You can also control the number of frames used to make the transition and the quality of the image which help improve the output. The Dot Delay feature enables you to specify the movement of each dot in order to emphasize certain features from the animation. In our tests, the program successfully combined photos and generated animations as GIF, AVI and SWF files. It required insignificant resources and had no impact on the computer performance. If you are looking for a photo morphing tool and want to create animations, the Morpheus Photo Animator is an easy to use solution.
