Adobe Photoshop's biggest bonuses are its numerous filters, brushes, textures, the layers and canvas panels. The layers allow you to build on top of what you have already done. You can easily erase or hide layers using the Layer panel on the left side of the workspace. When working in the Layer panel, remember to use the eye dropper to select the area you want to work within. This allows you to spot errors easier as the eye is already set upon a particular area of the image. Graphic design software in the early days was hard to use. Visual styles. This is a popular feature for editing backgrounds. You can add fabric on a sofa with a simple stroke of a paint bucket, change the position of items to get a perfect vertical or horizontal look. A word of advice: don't create a fabric consistency in PSD unless you want to bleed through into the design. Otherwise, you'll just be replacing a layer with a new one that does the same thing. But if you do apply the graphic to a living design, then you'll get the right fabric. Raster rates. This should always be a priority when you create images. Photoshop groups images into different raster rates, including very slow, slow, normal, fast and superfast (!). You can filter the raster files to get the best speed for your images. If you are creating a website, you'll want to make sure that your images are very well designed and loaded before they go live. Camera raw file support. You can import photos in your camera raw file (CR2, CRW, etc), which supports a really wide range of cameras from the latest technology, like Leica, Nikon, and Sony. With the Photoshop Camera Raw file support, you can easily bring your RAW images into your edits. You'll be able to edit the colour, saturation, gradients, and more, without having to convert to another type of file. Edge lighting. If you've ever used Photoshop to create backgrounds, you'll be interested in this new feature. Edge lighting turns out lights on the periphery of an image, so you'll be able to light things like a table, sideboards, or lamps. This feature allows you to get that perfect subtle lighting with a broader range of available lights.
