Adobe Camera Raw remains the one program that most all photographers have to access in order to do their best work. I don't like Adobe's subscription announcement, the fact that the Adobe Creative Cloud is now due for renewal in 2018, or that Mac users are required to purchase an ADC subscription if they want to access Camera Raw.

When to Use It: You can use the Gradient tool to create a mathematically perfect gradient. The Gradient tool can also be used to create beveled, reflection-type effects, and objects within Photoshop. It can also be used to add a color border to an image. You can use the Gradient tool to make your layer background black instead of white. It's also a great way to set your fill to black for logos or text. **Tips and Tricks:** When you first open the Gradient tool, the yellow box shows you the ratio in which the gradient will fill the background. You can change the fill setting for your gradient by

moving the border or slider bar to increase the size of the box. You can drag the slider bar to the left or right to adjust the size of the gradient. If you would like to adjust the size of the gradient, but would like to keep the yellow box as your fill, you can hold the shift key while dragging the slider bar. The gradient will fill the background without a box. **What It Does:** The Filter tool is used to apply creative things like halftone (dot) patterns, spot fills, blends, and text overlays to photos. The Shadows & Highlights tool is used to add a dark and light effect to an image. The Gaussian Blur tool is used to soften photos without blurring the image. **Tips and Tricks:** You can apply spot or halftone spots by clicking on the Spot tool and dragging a live color. You can apply halftone patterns to your images by clicking on the Halftone Pattern tool and starting to drag your mouse over the photos.
