In recent years, electronic watermarking has been attracting attention as a technology of embedding a digital watermark on a moving image. However, if the electronic watermarking technique is applied to a moving image, there is a problem of degrading the quality of a reproduced image. For example, when the electronic watermarking technique is applied to a moving image, an image that would have been an "audio only" reproduction during reproduction of a moving image and an "audio and video" reproduction during reproduction of a moving image, in some cases deteriorates. According to the related art, when the electronic watermarking technique is applied to a moving image, a moving image reproduced from recording medium to which electronic watermarking is applied is evaluated, and the video quality of an image embedded with electronic watermarking is reduced in order to reduce a reduction in the audio quality.
