The new interface is logically laid out, with the most commonly used tools in the right places, and all of the tools in a unified palette. So it's easy to launch and use existing tools, since Lightroom has removed its toolbar and placed tools in a fully customizable dock that can access all the tools you need, right at your fingertips. I really like the new tools in the toolbox. I like the way the toolstrip appears, with saved user presets; the ability to quickly and easily open and save presets; one tool that combines three functions (such as a Blur/Sharpen tool combined with noise-reduction or a Soften/Defringe tool); and some excellent new features. As we've repeatedly pointed out, Lightroom's and Elements' major enhancements have been designed to influence the future of the software. The Photo Matching features are already indispensable, and HD video editing abilities provide yet another reason to upgrade. But the biggest change is likely to be the ability to work with images that are stored outside of the standard Windows file hierarchy. This lets you create an image that's optimized for use with your phone, tablet or computer. Adobe also seems to be softening the edges around the Photoshop brand. The company is releasing elements that will let customers run Photoshop, Elements, Photoshop Elements and CS6. In addition, the new User Interface is what we're talking about. Sketch is an all-new capture and creation app for iPad. It allows designers and illustrators to create with iPad by drawing and erasing directly on top of their photos or on any layer in the Photoshop document.
